XTRA PROTECTION
AGAINST INFECTION

XABO®

MIETHKES NEW ANTIBIOTIC-IMPREGNATED CATHETER

- + use of antibiotic-impregnated catheters can prevent two-thirds of shunt infections²
- + the prevention of shunt infections has a positive impact on the resources time and cost²
- + gentle sterilization process and specially developed packaging minimize degradation products and maintain the initial antibiotic load for a prolonged period of time⁹

38 days

XABO catheters continuously release antibiotics for at least 38 days.³

36 months

XABO catheters are the only antibiotic-impregnated catheters for hydrocephalus therapy with a shelf life of up to 36 months.⁴ This simplifies the clinical routine and the handling for the physician.

30 degrees

XABO catheters withstand storage temperatures up to 30°C.⁴
